

DEFENDERWALL™

MANAGED NETWORK SECURITY

Best eSecurity Protection from  **xDEFENDERS, INC.**
INFORMATION SECURITY SOLUTIONS

DefenderWall Appliances from xDefenders, help you enforce and manage a robust Information Security Architecture. The DefenderWall is affordable, flexible and includes a complete suite of Internet Security Applications, providing “defense-in-depth”. xDefenders incorporates **Best Security Practices** to protect your applications, databases, systems, and networks.

Security Services

xDefenders works as a member of your I/T team, providing pro-active system and security administration. As your trusted security partner, we provide management and monitoring of key security infrastructure and service components. xDefenders manages and monitors Firewalls, Intrusion Prevention Systems (IPS), Intrusion Detection Systems (IDS), and Central System Log Servers to deliver a centralized, integrated security solution. xDefenders provides a Service Level Agreement (SLA) and Escalation Plan to insure the safety and availability of your information assets.

Security Operations Center (SOC) in Rochester, NY - Our state-of-the-art security management facilities are SAS 70 certified and located in a secure Tier 4 Class data center. The center has redundant power, ISP connections, and management consoles are staffed 24x7. Our security analysts use correlation engines to identify faults, attacks, and escalate immediately, according to client plan.

Standard Defender Services include remote monitoring, operating system updates, application software support and subscription, timely database updates, administrative support, and next day hardware replacement, Monday thru Friday from 8:30 am to 5:30 pm. **DefenderPro Services** offer management and monitoring services with a rapid response and administrative support, 24 hours per day, 7 days per week, leveraging the SOC resources. SOC staff monitor for attacks and escalate response according client policy

Managed Services include:

System Administration
Real-time Monitoring for Availability
Back-Up Management
Next Business Day Replacements
Management Reporting

Security Administration
Rule Sets Optimization and Testing
CISSP Advice and Guidance
Technical Phone and email Support
Escalation Plans

Company History

Founded in 2003, xDefenders has focused exclusively on Information Security for business. We have “Enterprise-class” experience with systems, networking, web application development, and proven methodologies. xDefenders has a large client base across the USA. The company was acquired by Synergy Global Solutions, based in Rochester, NY in April of 2007. Synergy was founded in 1971 and has over 200 employees with offices across Western New York.

DEFENDERWALL™

MANAGED NETWORK SECURITY

AppDefender Protects critical Web applications with this **reverse proxy**, HTTP/S firewall with IPS. This appliance provides SSL off-loading, blocks SQL-injections, malware attacks, and data leak prevention. See www.owasp.org for a list of web application attacks that are detected and prevented.

ESM—Enterprise SysLog Manager Collects **syslog data** from critical systems and network devices into a central database. Graphical Web Interface makes it easy to search the database for answers. Historical, forensic data is stored. “Learn- mode” sets thresholds unique to your environment. Daily Over-Threshold Report focuses your attention on major issues. A correlation engine (Bacon) provides real-time alerts with escalation. **Compliance (Access) Reports** automatically produced for management.

NetDefender The **Intrusion Detection System (IDS)** includes the industry leader—Snort (signature database), BASE (reporting) and Bacon (correlation and escalation engine). The built-in Honeypot will immediately detect malware on your network and alert. ARP Monitoring will correlate MAC and IP addresses to detect “man-in-middle” attacks, with automatic reporting.

MaiDefender This policy-based solution will eliminate **SPAM and Viruses** from your email environment at the gateway level. Incorporates Grey-Listing, LDAP integration, Real-Time Black-hole Lists, Scoring Spam Filter Levels, and Virus updates from 3 different sources. User Quarantines and Threshold settings. Detailed Reporting and forensic research capability.

MonMan Remote management and monitoring of Cisco ASA, Pix, Fortigate, Security Routers, and other network devices. Connects to the serial port of the Firewall and to the external network. Up-time monitoring and syslog event data is collected at our SOC. Alerts are monitored 24x7. Formal **Compliance Reports** and Logs are emailed to you regularly.

SysDefender “Test and Patch” security strategy for identifying internal and external **network & system Vulnerabilities**. Thousands of tests are performed with vendor-based remediation advice provided. This portable appliance reduces your cost of security testing. Reports are based on proven methods and reveal “Risk Levels”. Executive Summary and Detailed (HTML) Reports are delivered with CISSP consulting.

WebDefender Enforces your Internet Acceptable-Use-Policy. This **Web Content Filtering** solution restricts access to undesirable web sites. Provides web caching, LDAP integration, group support, plus user and site detailed reporting. Based on the popular **SmoothWall** (forward proxy) application or the powerful, **Cymphonix** Net Composer appliance. Composer is an in-line firewall with bandwidth shaping.

DefenderWall appliances are based on rackable, scalable HP servers.

Symantec Endpoint Protection (SEP) is professionally designed, deployed, managed and monitored by xDefenders.

Cisco ASA, PIX, Security Routers, Fortigate and SonicWall appliances are professionally managed and monitored, 24x7.
