

xDefenders Releases Intrusion Prevention System (IPS)

xDefenders, of Fairport NY, announces the enhancement of its *DefenderWall*[™] Managed Security Appliance. The new Intrusion Prevention System (IPS) will enhance the current *NetDefender* Firewall by leveraging Snort Rules within its Firewall Rule-Set. This enhancement is also available as an upgrade for current *NetDefender* Firewall users.

The IPS will dynamically detect and block worms, viruses, malware, spyware and other malicious attack signatures. The current *NetDefender* Firewall already detects and blocks port-scans using behavioral based technologies. The current *NetDefender* includes IDS.

The *DefenderWall*[™] delivers network and application-layer security on hardened Linux-HP servers. These services are integrated into one or more security-hardened, high-performance, scalable HP appliances. For larger organizations, multiple-dedicated appliances can be installed for distributed security services, supporting thousands of users.

DefenderWall[™] Applications:

1. *AppDefender* - Reverse Proxy - Web Application IPS/Firewall
2. *MailDefender*[®] - Spam and Virus Filter, MailServer and MailArchive
3. *NetDefender* – Intrusion Prevention System (IPS and IDS) Firewall, VPN,
4. *SysDefender* - Vulnerability Testing
5. *WebDefender* - Forward Proxy - Web Content Filter
